

QUICKBORN QUBE

A PRODUCTION READY Oracle Retail System

- ✓ I want an Oracle Retail Merchandising System implemented in 6 months timeframe
- ✓ I want to lower my short and long term TCO
- ✓ I want to make an informed decision if I should buy, host or use the cloud

With Quickborn Qube, mid-market retailers can own a complete production grade Oracle Retail MDM and planning solution that includes both software and hardware. Qube is more than a methodology, it's a real working system!

What is the Qube?

The Qube is a production ready box that houses **all of the Oracle Retail Merchandising and Planning applications on a single piece of hardware**. The hardware is sized appropriately for all applications to run and perform at the expectations of a mid-market retailer.

- The installation and integration of Oracle Retail applications, as well as the purchase and sizing of hardware is pre-configured and simplified.
- The use of pre-built data conversion services and an established implementation methodology speeds up the implementation and reduces complexity.
- The total cost of ownership is reduced by streamlining all phases of the implementation, reducing overall resource need, reducing hardware cost and speeding the time to implement.

Applications part of the Qube:

- Oracle Merchandise Operations Management (MOM) Applications: RMS, RPM, ReSA, ReIM, Alloc, SIM, RIB.
- Oracle Planning Applications (RPAS): MFP, RDF, AP, IP.

Qube can be integrated with your existing Oracle Retail platform and various other systems. Designed as a complete end-to-end solution, Quickborn also provides full hosting and managed support. Contact us to learn more!
